

## RAD Summary

RAD (Rapid Application Development) is a Software development methodology emphasizing quick prototyping and iterative delivery over strict planning and requirements. It Prioritizes speed, flexibility.

### Key Features:

1. Prototyping
2. User Involvement
3. Iterative process
4. Minimal planning
5. Speed

### Advantages:

1. Faster delivery of functional software.
2. Better alignment with user expectations.
3. Adaptability to changing requirements.
4. Early risk identification and mitigation.

RAD works best for projects with tight deadlines, evolving requirements and when end-user feedback is critical.
